

Optimized for the Macintosh

The Premier Document Management and Workflow Solution for the Mac Since 1988

Apple's Macintosh platform is the solution of choice for many organizations – from small offices, schools, and government agencies to large commercial enterprises. Despite a wealth of specialized solutions for the Mac, the document management and workflow arena consists of many second-class products with limited capabilities. The exception: Optix – the only fully functional document management and workflow application available for the Mac – which can address all your needs, including super-fast scanning, indexing, complex workflows, and text search. Our integration with Sybase on an OS X server allows you to deploy a complete client-server solution on the Mac.

"Optix is the first system I ever purchased that did everything it said it could - and more!"

Joe St. Marie
Supervisor
Archives and Records Center
Bechtel Nevada

Optix has been a leading Mac solution for over fifteen years, and is rooted in decades of technology experience. Our Optix development staff pioneered some of the earliest and largest document management systems ever built. Optix continues to be the standard by which all other document management and workflow products are measured on the Macintosh platform.

The World's Fastest Mac-Based Scanning Solution

All organizations produce an overwhelming amount of paper documents. Manual filing, copying, and routing of paper-based materials is a time-consuming and costly endeavor. With Optix, you can effortlessly scan, compress, and store multi-page, double-sided documents at rates greater than one page per second and dramatically diminish your paper burden.

Optix also includes a "drag-and-drop" Graphical Screen Generator tool that ties to high-end commercial databases. This way, you can custom design your own indexing screens in minutes. And, the fields you design are automatically linked to a underlying database table so that you have a powerful data storage solution available right away with no programming required. Then, all you need to do is scan, index, and store documents, or simply drag files from your Mac desktop, to create a robust repository. Your users can immediately query on any field, find exactly what they need, and view it in seconds.

The Premier Document Management and Workflow Solution for the Mac Since 1988

Representative Customers

Optix is the preferred document management and workflow solution for many Mac-based and cross platform organizations worldwide, including:

- Ames Community School District
- Bechtel
- Hallmark
- Joint Oceanographic Institute
- Maine Educational Opportunity Center
- Pensacola Christian College
- San Joaquin Employee's Retirement Association
- San Jose Unified School District

You can easily configure Optix to support all the document types and departments in your organization. Optix allows you to create as many distinct indexing schemes as you need to keep all your files organized. Plus, Optix allows you to restrict access to sensitive files by assigning security levels to repositories, files, and groups so that only the right people see the right information.

For even greater efficiency, you can add Optix Workflow, a powerful tool which allows you to speed information throughout your organization. Optix Workflow includes an easy-to-use Graphical Route Editor that allows you to create custom workflows with a few mouse clicks. Then, to start a workflow, simply drop a document on to a route and it's on its way to whoever needs it next, exactly when they need it.

We also offer Optix Web, which allows you to publish documents to the Web for access by remote users. Optix Web supports browser-based query, viewing, and workflow from any platform, anywhere.

If you find you need additional capabilities, no problem. Optix is fully scriptable and recordable, so it interacts seamlessly with other Mac applications.

An Optix implementation - and full, hands-on training - typically takes a week or less. So you can quickly be on your way to realizing dramatic operational improvements. And, our top-notch technical support team is only a phone call away for all your post-implementation questions and needs.

Don't delay. Join many other Mac-based and cross-platform organizations and boost your efficiency with Optix.
